DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir.1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 2416

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 32 and 34-50 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 6,687,263. Although the conflicting claims are not identical, they are not patentably distinct from each other because the application's claims 32-50 merely narrow the scope of the patented claims by claiming some claim elements (i.e., a packet of digital data elements arranged 1...n, sending stops when the entire packet is sent once, a first transmitter for sending a first stream, a second transmitter for sending a second stream of digital data elements, first receiver for first stream of digital data elements, and a second receiver for a second stream of digital data elements). The application's claims are nearly identical in every other respect to the patented claims. Therefore, the application's claims are simply narrow versions of the patented claims. It is Examiner's position that narrowing the patented claims by claiming some claim elements (i.e., a packet of digital data elements arranged 1...n, sending stops when the entire packet is sent once, a first transmitter for sending a first stream, a second transmitter for sending a second stream of digital data elements, first receiver for first stream of digital data elements, and a second receiver for a second stream of digital data elements) of the patented claims would have been obvious to one of ordinary skill in the art in view of the patented claims. It is important to note that the instant application is a combination of the application, which yielded the patent (USP

6,687,263) used herein as the basis for the obvious-type double-patenting rejection.

The applicant is attempting to narrow the parent application's claims by adding some of the claim elements in the continuation at issue here. If allowed, the application at bar would unjustly extend Applicant patent protection beyond the statutory period, at the same time, granting broader protection to the applicant.
